A Jain PharmaBiotech Report

A U T H O R ' S B I O G R A P H Y

Professor K. K. Jain is a neurologist/neurosurgeon by training and has been working in the biotechnology/biopharmaceuticals industry for several years. He received graduate training in both Europe and USA, has held academic positions in several countries and is a Fellow of the Faculty of Pharmaceutical Medicine of the Royal College of Physicians of UK. Currently he is a consultant at Jain PharmaBiotech. Prof. Jain's 476 publications include 30 books (6 as editor + 24 as author) and 50 special reports, which have covered important areas in biotechnology, gene therapy and biopharmaceuticals. Recent books include "Textbook of Personalized Medicine" (Springer 2009; Japanese edition 2012; 2nd ed Springer 2015), "Handbook of Biomarkers" (Springer 2010, Chinese edition 2016, 2nd ed 2017), "Handbook of Nanomedicine" (Springer 2008, Chinese edition 2011, 2nd ed 2012, 3rd ed 2017), "Application of Biotechnology in Cardiovascular Disorders" (Springer 2011), "Application of Biotechnology in Neurology" (Springer 2013), and "Application of Biotechnology in Oncology" (Springer 2014). He has edited "Applied Neurogenomics" (Springer 2015).

A B O U T T H I S R E P O R T

This report will cover sequencing technologies, equipment, reagents, markets and companies involved in this area. It is an extension of the report on Molecular Diagnostics, which has been in continuous publication since 1995. New advances and applications of sequencing have justified the issuance of a separate report on the topic.

TABLE OF CONTENTS

0. Executive Summary	17
1. Introduction	19
Definition and scope of sequencing	19
Historical aspects of sequencing.....	19
Basics of molecular biology	20
DNA	20
<i>DNA polymerases.....</i>	20
<i>DNA helicases.....</i>	21
<i>Restriction endonucleases</i>	21
RNA	21
<i>RNA polymerases.....</i>	22
<i>Non-coding RNAs</i>	22
DNA transcription.....	22
Chromosomes	23
<i>Chromatin.....</i>	23
<i>Chromosome sequences</i>	23
Telomeres.....	24
Mitochondrial DNA	24
Genes.....	25
<i>The genetic code.....</i>	25
<i>Gene expression</i>	25
<i>Genes and human diseases</i>	26
The human genome	26
<i>ENCODE</i>	27
The epigenome.....	28
<i>Epigenetics and epigenomics</i>	28
<i>DNA methylation.....</i>	28
<i>Human Epigenome Atlas</i>	29
Metagenomics	29
Variations in the human genome	29
Variations in DNA sequences	30
Single nucleotide polymorphisms	30
Haplotyping.....	31
Complex chromosomal rearrangements	31
Insertions and deletions in the human genome	31
Large scale variation in human genome	32
Variation in copy number in the human genome	32
Structural variations in the human genome	34
Transposons.....	35
<i>Retrotransposon capture sequencing</i>	35
Mapping and sequencing of structural variation from human genomes.....	36
Impact of sequencing on healthcare.....	36
2. DNA Sequencing Technologies.....	39
Introduction	39
DNA extraction and sample preparation	40
<i>Apollo 300 System for next generation sequencing</i>	41
<i>Electrophoresis-based method.....</i>	41
<i>Ion OneTouch System</i>	42
<i>Microfluidics-based extraction and sample preparation.....</i>	42
<i>Pressure Cycling Technology</i>	42
<i>Selective immobilization of nucleic acids onto magnetic microparticles.....</i>	42
<i>Targeted and hybridization-based DNA capture.....</i>	42
Sanger-sequencing technology	43
<i>Dye-terminator sequencing</i>	43
<i>Large-scale sequencing.....</i>	44
<i>Automated DNA-sequencing</i>	44
<i>Enhancements of Sanger-sequencing</i>	44
<i>ABI PRISM® 310 Genetic Analyzer.....</i>	45
<i>Life Technologies' 3500 Dx genetic analyzer.....</i>	45
Limitations of sequencing methods and measures to remedy them	45
<i>Paired end transcriptome sequencing to overcome short read lengths</i>	46
<i>Long vs short read lengths</i>	46
<i>Validation of NGS data.....</i>	47
Emerging sequencing technologies.....	47
Chemical DNA sequencing	48

Chemical affinity capture and massively parallel DNA sequencing.....	49
Next generation sequencers	50
4300 DNA analyzer	50
Apollo 100	50
Life Technologies 3500 series Genetic Analyzer.....	50
Cyclic array sequencing	51
CEQ™ 8000.....	51
DeepCAGE sequencing.....	51
Electron microscope-based DNA sequencing	52
GS-FLEX system (Roche)	53
<i>Background of sequencing technology</i>	<i>53</i>
IBS sequencing technology	56
Illumina Genome Analyzer System	57
<i>MiSeqDx</i>	<i>58</i>
<i>NextSeq 500 desktop sequencer</i>	<i>58</i>
<i>Next generation sequencing based on Lightning Terminators.....</i>	<i>58</i>
<i>MiSeq FGx.....</i>	<i>59</i>
<i>NovaSeq 6000 system.....</i>	<i>59</i>
Ion Torrent's sequencing technology	59
<i>Ion S5 system</i>	<i>60</i>
MegaBACE 500	60
Microdroplet-based PCR for large-scale targeted sequencing.	61
Millikan sequencing	61
Multiplex amplification of human DNA sequences	61
Nanoscale sequencing	62
Polonator sequencer.....	62
RainStorm™ microdroplet technology	63
Sequential DEXAS	63
SOLiD system: sequencing by ligation	64
PCR-based DNA sequencing technologies	65
<i>Bridge amplification PCR system</i>	<i>66</i>
<i>COLD-PCR and sequencing.....</i>	<i>66</i>
<i>Digital PCR.....</i>	<i>67</i>
<i>Dual primer emulsion PCR.....</i>	<i>67</i>
<i>Emulsion PCR</i>	<i>68</i>
<i>Multiplex PCR</i>	<i>68</i>
<i>SiMSen-seq for ultrasensitive detection of mutations</i>	<i>68</i>
Non-PCR based sequencing	69
Nucleic acid sequence-based amplification	69
Microarray-based DNA sequencing technologies.....	69
<i>Arrayit's® H25K</i>	<i>70</i>
<i>High-throughput array-based resequencing.....</i>	<i>70</i>
<i>Sequencing by hybridization.....</i>	<i>70</i>
<i>SOLiD-System based ChIP-Sequencing</i>	<i>71</i>
<i>Companies developing whole genome chips/microarrays.....</i>	<i>72</i>
Next generation sequencing vs microarrays for gene expression profiling.....	72
RNA sequencing.....	73
<i>RNA-seq vs microarrays.....</i>	<i>74</i>
<i>Capture sequencing.....</i>	<i>74</i>
<i>ChIP-Seq</i>	<i>74</i>
<i>Strand specific RNA sequencing</i>	<i>75</i>
<i>SHAPE-Seq</i>	<i>75</i>
<i>Applications of RNA-seq.....</i>	<i>76</i>
<i>Challenges for future development of RNA-seq</i>	<i>76</i>
Exome sequencing	76
<i>Limitations of exome sequencing</i>	<i>77</i>
<i>Human exome microarrays</i>	<i>77</i>
<i>WES vs WGS.....</i>	<i>77</i>
Third generation sequencing	78
<i>SOLiD4 System.....</i>	<i>78</i>
<i>SOLiD PI System.....</i>	<i>79</i>
<i>Helicos™ Genetic Analysis System</i>	<i>79</i>
<i>Molecular Combing.....</i>	<i>80</i>
Nanotechnology-based sequencing.....	80
<i>DNA sequence by use of nanoparticles.....</i>	<i>80</i>
<i>Denaturation mapping of DNA in nanofluidic channels</i>	<i>81</i>
<i>Nanopore sequencing</i>	<i>81</i>
<i>Sequencing through graphene nanopores.....</i>	<i>84</i>
Convex lens-induced nanoscale templating	84
Detection of single molecules for sequencing	85
<i>Helicos™ Genetic Analysis System</i>	<i>86</i>

<i>Molecular Combing</i>	87
<i>Optical Mapping</i>	87
<i>Nanopore-based single-molecule detection of specific DNA sequences</i>	88
<i>Phasing through the sequencing of single molecules</i>	89
<i>Sequencing-by-synthesis for single-molecule sequencing</i>	89
<i>Single molecule DNA sequencing by use of carbon nanotubes</i>	90
<i>Single molecule sequencing using Qdot nanocrystals</i>	90
<i>Single-molecule DNA sequencing in a sTOP chip nanowell</i>	91
<i>Single-molecule real-time sequencing</i>	91
<i>Single molecule targeted sequencing using GenoCare™ Analyzer</i>	93
Single cell sequencing.....	93
<i>Drop-seq for single cell sequencing</i>	93
<i>MALBAC for single cell DNA sequencing</i>	94
<i>Microfluidic single-cell whole-transcriptome sequencing</i>	94
<i>Single cell sequencing of uncultured microbes</i>	95
<i>Single sperm sequencing</i>	95
<i>Single cell RNA sequencing</i>	96
<i>Single-cell combinatorial indexed sequencing</i>	96
<i>Single-stranded sequencing using microfluidic reactors</i>	97
<i>Future of single cell sequencing</i>	97
Thermosequencing.....	97
Whole genome sequencing for haplotyping.....	98
Mitochondrial exome sequencing.....	99
ImmunoSEQ technology.....	99
Future prospects of next generation sequencing.....	100
Devices for NGS.....	100
Reduction of errors in NGS.....	100
<i>Artifactual mutations during the sample preparation process</i>	100
<i>Contamination in high throughput sequencing</i>	101
<i>Duplex sequencing</i>	101
3. Role of Bioinformatics in Sequencing.....	103
Introduction.....	103
Growth of the sequencing database.....	103
Sequencing data storage.....	103
Cloud computing for sequencing data.....	104
<i>Cloud computing facilities</i>	104
Bioinformatics challenges of new sequencing technology.....	104
Construction of libraries for NGS.....	105
Bioinformatic tools for analysis of genomic sequencing data.....	106
Software for DNA sequencing.....	107
<i>Software from academic and open sources</i>	107
<i>Commercial software for sequencing</i>	108
ChIA-PET tool for analysis with paired-end tag sequencing.....	110
CLC Cancer Research Workbench.....	110
Compressive genomics.....	110
Detection of CNVs and gene duplications.....	111
Detection of SVs in massively parallel sequencing data.....	111
Differential expression analysis for sequence count data.....	112
DRAGEN™ Bio-IT Processor.....	112
Expression profiling without genome sequence information.....	112
Ingenuity® Variant Analysis™.....	113
Ion Reporter Software.....	113
Opal platform.....	113
VAAST.....	114
Accessing DNA sequence information.....	114
Clinical Genomicist Workspace for managing NGS-based clinical tests.....	114
Analysis of genomic variation by sequencing of large populations.....	115
Analysis of rare variants in NGS studies.....	115
Human gene connectome.....	116
Funding of research for interpretation of sequencing data.....	116
Future challenges for managing sequencing data.....	117
4. Comparative Analysis of Sequencing Technologies.....	119
General findings of the study.....	119
Sanger versus second generation marketed sequencers.....	119
Common features and differences among second generation sequencers.....	119
Third generation large sequencers.....	120
SOLiD4 versus competing large sequencers.....	120
Illumina's HiSeq sequencer.....	121
Third generation desktop sequencers.....	122

BGI's BGISEQ-500 desk top sequencer	122
Illumina's MiSeq sequencer	122
Roche GS Junior System	123
Life Technologies' Benchtop Ion Proton™ Sequencer	123
Oxford Nanopore's MinION™ system	124
The ideal desk-top sequencer	124
SWOT analysis of small sequencers	124
Concluding remarks on SWOT analysis of desktop sequencers	128
5. Sequencing for Research	131
Introduction	131
Applications in basic research.....	132
Barcoding of synapses in the brain	132
ChIA-PET technology for 3D study of the genome	132
ChIP-Seq for study of gene expression	133
Chromatin profiling by direct DNA sequencing	133
Discovery of immunoglobulin gene by pyrosequencing.....	133
Epigenetic modifications analyzed by next generation sequencing	134
Exome sequencing for study of human variation	134
Genome sequencing with combinatorial probe anchor ligation.....	135
Identifying protein-coding genes in genomic sequences.....	135
Mutation rate measured by direct sequencing.....	136
Protein-protein interactome network mapping	137
RNA sequencing.....	137
<i>Applications of RNA sequencing</i>	<i>137</i>
<i>Contribution of RNA structure to gene regulation revealed by RNA-Seq.....</i>	<i>137</i>
<i>Molecular indexing for quantitative targeted RNA sequencing</i>	<i>138</i>
Sequencing for the study of microchimerism	138
Sequencing for the study of CNVs	139
<i>CNVnator</i>	<i>139</i>
<i>GS-FLX sequencing for simultaneous detection of mutations and CNVs.....</i>	<i>140</i>
Sequencing the transcriptomes of stem cells	140
<i>Sequencing, stem cells and neurodegeneration.....</i>	<i>140</i>
<i>Sequencing, stem cells and regeneration</i>	<i>141</i>
Sequencing and synthetic biology	141
<i>Synthetic sequence in a bacterial cell</i>	<i>141</i>
<i>Synthesizing long DNA molecules.....</i>	<i>142</i>
<i>Functional synthetic proteins</i>	<i>142</i>
Single-cell sequencing for study of cell lineage	143
Sequencing of human genomes	143
100,000 Genomes Project.....	143
Genome of the Netherlands.....	144
Missing human genome sequences.....	145
Personal genome sequencing.....	145
Role of sequencing in identification of human remains	146
Saudi Arabian human genome program	146
Sequence map of the human pan-genome	146
Sequencing of African genomes	147
Sequencing of Korean genomes	147
Sequencing mitochondrial genome	148
Sequencing of ancient genomes.....	148
<i>Hominin genome.....</i>	<i>149</i>
<i>Neandertal genome.....</i>	<i>149</i>
<i>Anzick-1 genome</i>	<i>150</i>
<i>Genome of the Kennewick Man</i>	<i>151</i>
<i>Saqqaq genome.....</i>	<i>151</i>
<i>Sequencing and controversies about origin of Native Americans.....</i>	<i>152</i>
Whole genome sequencing.....	152
Whole-genome sequencing of methylome	153
Whole genome resequencing	153
Prospects of genome sequencing for human ancestry	153
Sequencing genomes of non-human primates	154
Sequencing of chimpanzee genome.....	154
Sequencing of macaque genome.....	154
Sequencing of gorilla genome.....	155
Sequence the genomes of vertebrate species	155
Sequencing genomes of other organisms	156
Species biodiversity study by the Canadian Centre for DNA Barcoding	157
Ant genome	157
Avian genomes	158
Bat genome	158

Body louse genome	159
Camel genome	159
Cat genome	159
Dog genome.....	160
Frog genome.....	161
Goat genome	162
Horse genome	163
<i>Ancient horse genome</i>	163
House fly	164
Mosquito genome.....	164
Mouse genome	164
Tibetan antelope genome.....	165
Turkey genome	165
Water flea genome.....	166
Whale genome	166
Woolly mammoth genome	167
Sequencing studies of the human microbiome.....	167
Human Microbiome Project.....	168
Human virome.....	168
Microbial codes to distinguish individuals	169
Single cell sequencing of the brain	169
Population targeted sequencing studies	170
Transcriptome sequencing for mRNA expression.....	170
RNA splice variants.....	171
Sequencing projects supported by US Government.....	171
NHGRI's sequencing initiatives.....	171
JGI's Community Sequencing Program	172
NIH funding for interpreting sequence variants in the human genome	173
NIH to fund studies of gene-environmental interactions in human diseases	173
Approved medical sequencing projects	174
1000 Genomes Project.....	174
Findings of some studies of the 1000 genomes project	175
HapMap catalog as a foundation	175
Role of SOLiD™ System in 1000 Genomes Project.....	176
Protection of privacy of participants in 100 Genomes project.....	176
Concluding remarks	177
Human Variome Project.....	177
Sequencing in space	177
Academic centers conducting research on sequencing	179
Important academic collaborations.....	180
Manpower for sequencing	180
New York Genome Center	181
USTAR Center for Genetic Discovery.....	182
US Government funding for research.....	182
<i>Joint Genome Institute</i>	182
<i>NHGRI's Clinical Sequencing Exploratory Research grants</i>	183

6. Applications of Sequencing in Healthcare	185
Introduction	185
Applications of sequencing in molecular diagnostics	185
Clinical exome sequencing	186
<i>ACE Clinical Exome test</i>	186
Diagnosis and screening of genetic disorders.....	187
<i>Cystic fibrosis screening using high-throughput NGS</i>	187
<i>CNV sequencing for diagnosis of chromosomal disorders</i>	187
<i>Genetic misdiagnosis due to limited population sequencing data</i>	188
<i>Karyotyping based on NGS</i>	188
<i>NGS for diagnosis of rare genetic disorders</i>	188
<i>Role of WGS in screening of newborns</i>	189
<i>Role of WGS in chromothripsis</i>	189
<i>Single cell sequencing for PGD</i>	190
<i>WGS for identification of genetic disorders in critically ill infants</i>	190
<i>WGS for pre-implantation genetic diagnosis in IVF</i>	190
Guidelines for use of sequencing for diagnosis	191
Incidental findings on clinical sequencing	191
NGS for diagnosis of CNS infections	192
NGS for detection of solid organ transplant rejection	192
NGS for forensic diagnosis	193
NGS-based molecular diagnosis at POC using mobile phone microscopy.....	193
Companies developing sequence-based molecular diagnostics	194
Sequencing in cardiovascular disorders.....	195

Inherited cardiomyopathies	195
Exome sequencing and mutations associated with risk of coronary heart disease	196
Sequencing for study of the human immune system.....	196
Sequencing for investigating drug-virome interactions in organ transplants.....	197
Immune profiling using a synthetic human virome	197
NGS-based HLA typing	198
<i>High-throughput HLA genotyping with deep sequencing.....</i>	<i>198</i>
<i>Approaches to NGS-based HLA typing.....</i>	<i>199</i>
<i>Applications of NGS-based HLA typing</i>	<i>200</i>
Applications of sequencing relevant to the human microbiome	200
Sequencing the gut microbiome for discovery of immunomodulators	200
Sequencing of gut microbes in obesity	201
Companies developing microbiome-based products	201
Pharmaceutical applications of sequencing	202
Drug discovery and development	202
Resequencing	203
RNA profiling	203
Quantitative selection of aptamers through sequencing	204
Next generation sequencing and drug safety	204
Sequencing in aging research	205
WGS for the study of supercentenarians	205
<i>Sequencing of APOE gene in centenarians.....</i>	<i>205</i>

7. Applications of Sequencing in Oncology	207
Introduction	207
Sequencing technologies for cancer.....	207
A project to assess sequencing technologies for tumor DNA	207
A universal NGS-based oncology test system	208
Amplicon sequencing in cancer	208
ASCO guidelines for use of NGS to test cancer susceptibility.....	208
Cancer Genome Atlas	209
Catalog of cancer genes.....	209
Detection of cancer biomarkers.....	210
<i>Sequencing mitochondrial DNA to identify cancer biomarkers</i>	<i>210</i>
<i>Biomarkers for personalizing cancer treatment</i>	<i>211</i>
Digital proteomics for cancer profiling.....	212
Discrepancies in cancer genome sequencing.....	212
Epigenome profiling	212
Exosome sequencing	213
Gaining insights into mutational processes	213
Multiple-gene sequencing panel to assess risk of hereditary cancer	213
Multiplexed cancer gene mutation analysis.....	214
NGS for enhancing verification rate of chromosomal structural rearrangements	214
NGS-based molecular profiling of cancer in FFPE specimens	216
Paired-end sequencing	217
Pathology tissue-ChIP.....	218
Quality control of NGS in oncology	218
RNA-Seq to study cancer transcriptome.....	218
Sequencing cancer cell lines.....	219
Sequencing for studying somatic mutations in cancer	219
Chromothripsis in cancer	219
Microsatellite instability in cancer genome.....	220
Somatically acquired genomic rearrangements in cancer.....	220
Sequencing for identification of FGFR gene fusions in cancer	220
Sequencing single cells to study evolution of cancer	221
Sequencing circulating tumor cell genomes	221
High throughput sequencing for anticancer drug discovery	222
NGS for developing targeted cancer therapies.....	223
Sequencing for assessing resistance to anticancer therapy	223
Sequencing of tumors of various organs.....	223
Brain tumors	223
<i>Sequencing for genetic alterations in gliomas</i>	<i>224</i>
<i>Sequencing for genetic alterations in medulloblastoma</i>	<i>224</i>
Breast cancer	224
<i>BRCA mutations.....</i>	<i>225</i>
<i>Circulating nucleic acids as biomarkers of cancer</i>	<i>225</i>
<i>Deep sequencing of miRNA for signatures of invasiveness.....</i>	<i>226</i>
<i>NGS reveals heterogeneity of breast cancer</i>	<i>226</i>
<i>Sequencing of breast cancer metastases.....</i>	<i>226</i>
<i>Triple negative breast cancer.....</i>	<i>227</i>
<i>Whole genome sequencing in breast cancer</i>	<i>227</i>

Colorectal cancer	228
Gastric cancer	229
Head and neck cancer	230
<i>NGS for detection of HPV sequences in carcinoma of oropharynx</i>	230
Hematological malignancies	230
<i>Acute myeloid leukemia</i>	230
<i>Acute promyelocytic leukemia</i>	231
<i>Chronic myelomonocytic leukemia</i>	231
<i>Hairy-cell leukemia</i>	232
<i>Hematological cancer risk inferred from blood DNA sequence</i>	232
<i>Myelodysplastic syndromes</i>	233
<i>Sequencing in chronic neutrophilic leukemia and atypical CML</i>	233
Sequencing in hepatocellular carcinoma.....	233
Lung cancer	234
<i>NGS to distinguish primary lung cancer from pulmonary metastases</i>	234
<i>Sequencing of small cell lung cancer</i>	234
Melanoma	235
Ovarian cancer	235
Prostate cancer.....	236
<i>Identification of mutations in prostate cancer by exome sequencing</i>	236
<i>Role of sequencing in liquid biopsy for prostate cancer patients</i>	237
Current status and future prospects of NGS applications in oncology	237
<i>Actionable Genome Consortium to guide NGS in clinical oncology</i>	239
<i>Guidelines for interpretation/reporting of sequence variants in cancer</i>	239
<i>Points to consider for germline findings in tumor-only sequencing</i>	240
<i>Translation of gene panel sequencing into routine cancer diagnosis</i>	240
8. Sequencing in Genetic Disorders	243
Introduction	243
Approaches to sequencing in genetic disorders	243
DNA sequencing for prenatal disorders	243
High-throughput sequencing in Undiagnosed Disease Program at NIH	244
Sequencing of maternal plasma for detection of fetal aneuploidy	244
Sequencing for study of transposons	246
Sequencing genomes of the newborn to screen for genetic disorders.....	246
Study of rare variants in pinpointing disease-causing genes	248
Tandem repeat variability for detection of genetic factors in diseases	248
Whole genome sequencing for diagnosis of genetic disorders	249
Whole exome sequencing for diagnosis of genetic disorders	249
WES and WGS in monogenic disorders	250
Whole genome sequencing of a human fetus from maternal plasma	251
Genetic disorders investigated by sequencing	253
Bartter syndrome.....	253
CHARGE syndrome.....	253
DiGeorge syndrome	253
Discovery of the gene for Miller syndrome.....	254
Discovery of the gene for Kabuki syndrome.....	254
Familial combined hypolipidemia.....	255
Familial thoracic aortic aneurysm	255
Hereditary ataxia	255
Hereditary blindness.....	255
Neurofibromatosis type 1	256
Noonan syndrome.....	257
Proteus syndrome	257
Syndrome of hypogonadotropic hypogonadism, ataxia, and dementia	258
Syndrome of polyarthritis nodosa vasculopathy	258
X-linked disorder due to N-terminal acetyltransferase deficiency	258
Sequencing in mitochondrial disorders.....	259
<i>Chronic progressive external ophthalmoplegia</i>	259
Role of NGS in prevention of chromosome abnormalities & monogenic disorders.....	260
9. Sequencing in Neurological and Psychiatric Disorders.....	261
Introduction	261
Sequencing in Alzheimer disease.....	261
Sequencing in Parkinson disease	263
Sequencing in Huntington's disease	264
Sequencing in Wilson's disease	264
Sequencing in ataxias	264
Sequencing in epilepsy	265
Epileptic encephalopathy.....	265
Sequencing for mutations in familial amyotrophic lateral sclerosis	266

Sequencing of whole genome in Charcot-Marie-Tooth disease	266
Sequence-based detection of a variant of Lambert-Eaton syndrome	267
Sequencing in muscular dystrophy	267
Sequencing in acute brain injury due to hemorrhage.....	268
Sequencing for mutations in autism spectrum disorders	268
Sequencing for diagnosis of intellectual disability	269
Sequencing in neurodevelopmental disorders	269
NGS for identifying mutations in RNA gene.....	269
WES in neurodevelopmental disorders	270
Sequencing in Möbius syndrome.....	270
Sequencing in attention-deficit/hyperactivity disorder	270
Sequencing in schizophrenia and bipolar disorder	270
Sequencing in drug addiction.....	271
10. Applications of sequencings in infections	273
Introduction	273
DNA sequencing for study of bacterial epidemics	273
Sequencing of GAS genotype emm89	274
Genome sequencing of <i>H. influenzae</i> to identify population structure.....	274
Role of sequencing in cholera epidemics	274
Role of sequencing in epidemic of Shiga toxin-producing <i>E. coli</i>	275
Sequencing study of emergence of <i>M. tuberculosis</i> in East Africa	276
Sequencing study of Salmonella emergence in Sub-Saharan Africa	276
Sequencing of ancient specimes from past epidemics	277
Sequencing for tracking hospital acquired infections.....	277
Sequencing for investigation of MRSA outbreaks	277
Role of sequencing in tracking a hospital infection of <i>K. pneumoniae</i>	278
Role of whole genome sequencing in identification of <i>C. difficile</i>	279
Role of NGS in diagnosis of infectious agents causing meningitis & encephalitis	279
Role of sequencing in the management of bacterial infections	279
Pyrosequencing of microbial flora in leg ulcers.....	279
Sequencing for mapping genomic variation in <i>Mycobacterium ulcerans</i>	280
Sequencing in the management of antimicrobial drug resistance	280
Maximum-depth sequencing.....	280
Sequencing for study of antibiotic resistance in bacteria	281
Sequencing for predicting the virulence of MRSA.....	281
Sequencing for detection of drug resistance in Plasmodium falciparum	281
WGS for diagnosis of drug-resistant <i>M. tuberculosis</i>	282
Sequencing for investigation of food-borne infections.....	282
Sequencing for mapping genetic interactions in bacteria.....	282
Metagenomic sequencing of bacteria	283
Sequencing of DNA from single cells of bacteria	283
Sequencing of the fungal genomes	284
Sequencing of human salivary microbiome.....	284
Next generation sequencing for antibacterial therapeutic discovery	285
High throughput sequencing for diagnosis of viral diseases	285
Sequencing in the management of HIV/AIDS	286
Long read sequencing for personalizing HIV therapy.....	286
NGS for studying neuroAIDS	286
Sequencing plus immunological analyses to study HIV evolution	287
Surveillance of drug resistance in HIV-infected individuals	287
Sequencing in the management of Ebola virus infection	288
Sequencing in the management of HCV	288
Sequencing for detection of a novel pegivirus associated with HCV.....	289
Sequencing genomes of hemorrhagic fever viruses	289
Sequencing genome of Lassa fever virus.....	289
Sequencing genome of a rhabdovirus associated with acute hemorrhagic fever	290
Surveillance of H1N1 influenza A virus using resequencing arrays	290
Regulatory aspects of sequencing for diagnosis of infections	290
11. Role of Sequencing in Personalized Medicine.....	293
Introduction	293
Technologies relevant to sequencing and personalized medicine	293
Whole genome sequencing and personalized medicine.....	293
Whole exome sequencing and personalized disease risk.....	294
Large-scale deep sequencing of human genomes.....	295
Personal Genome Project.....	295
Role of sequencing in personalized cancer management	296
Circulating cell-free DNA sequencing for personalized cancer therapy	296
Companies and cancer centers using sequencing for personalized oncology	296
Standardization of sequencing for personalized medicine	298

Regulating genomic testing in the era of personalized medicine	298
Future of sequencing and personalized medicine.....	298
12. Current Status and Future Prospects	301
ACMG clinical laboratory standards for NGS.....	301
Regulatory and quality control issues of sequencers in the USA	301
International NGS standardization	302
Applications of NGS in clinical trials.....	303
Human transcriptome array in clinical trials.....	303
Challenges for clinical applications of NGS	303
Direct-to-consumer WGS services	304
Ethical aspects of sequencing	305
Future trends in clinical sequencing	306
Rare Diseases Genomes Project.....	306
13. Markets for Sequencers	307
Introduction	307
Methods used for estimation of sequencer markets.....	307
Currently marketed sequencers.....	307
Academic and research markets for sequencing	308
Factors affecting future development of sequencing markets.....	308
Future needs and support of research.....	308
Bioinformatics in relation to sequencing	309
Cost of integrating WGS into clinical care.....	309
Reducing the cost of human genome sequencing	309
<i>US Government-supported research on sequencing.....</i>	<i>310</i>
<i>Contribution of American Recovery and Reinvestment Act.....</i>	<i>312</i>
Cost of NGS	312
<i>Genome X Prize Foundation.....</i>	<i>313</i>
<i>Innovations to reduce cost of whole genome sequencing</i>	<i>313</i>
<i>Commercial aspects of low cost genome sequencing</i>	<i>314</i>
<i>Genome sequencing suitable for personalized medicine</i>	<i>314</i>
Global sequencing markets.....	314
Global markets for sequencers.....	315
Markets for sequencing services according to geographical regions	315
Global sequencing markets according to applications.....	316
Global sequencing markets according to therapeutic areas.....	317
Market trends for NGS	317
Needs of the clinical market for NGS	318
Sequencers for the clinical market	319
Challenges to developing market for sequencers.....	319
Recommendations	320
14. Companies Involved in Sequencing	321
Introduction	321
Major players in sequencing	325
Profiles of companies involved in sequencing	326
Collaborations.....	500
15. References.....	507
